

SolarWinds® Database Performance Analyzer (formerly Confio Ignite) for Sybase ASE is a comprehensive database performance monitoring and analysis solution for DBAs, IT managers, and application developers. Database Performance Analyzer eliminates performance bottlenecks, improves application service, and reduces overall cost of Sybase ASE operations.

## Focus On Response Time

Database Performance Analyzer is different because it focuses on database response time, finding the root causes of delays inside of Sybase ASE. Database Performance Analyzer tracks every query in every session, and captures the Sybase wait events that impose delays on the query.

Database Performance Analyzer helps you quickly pinpoint the issues that have the greatest impact on response time.

## Show The Complete Picture

Database Performance Analyzer correlates essential statistics to give an understanding of how the response time, server health, and session statistics interact, providing a complete performance picture not available through Sybase and other performance monitoring tools.

- **Query Bottlenecks.** Always know exactly which queries are your most serious issues, and why.
- **Server Health Resources.** Customizable metrics measure CPU, logical and physical I/O, session information, memory utilization, and more.
- **Query Statistics.** Execution statistics for each query show how response time changes as server resources change.
- **Real Time Sessions.** Within seconds, Database Performance Analyzer is publishing status of sessions so that DBAs can take immediate action on current performance problems.

No other Sybase performance solution ties response time detail to server health and sessions to give an overall understanding of why Sybase is slowing applications and what to do about it.

Fully Functional for 14 Days

## Key Advantages

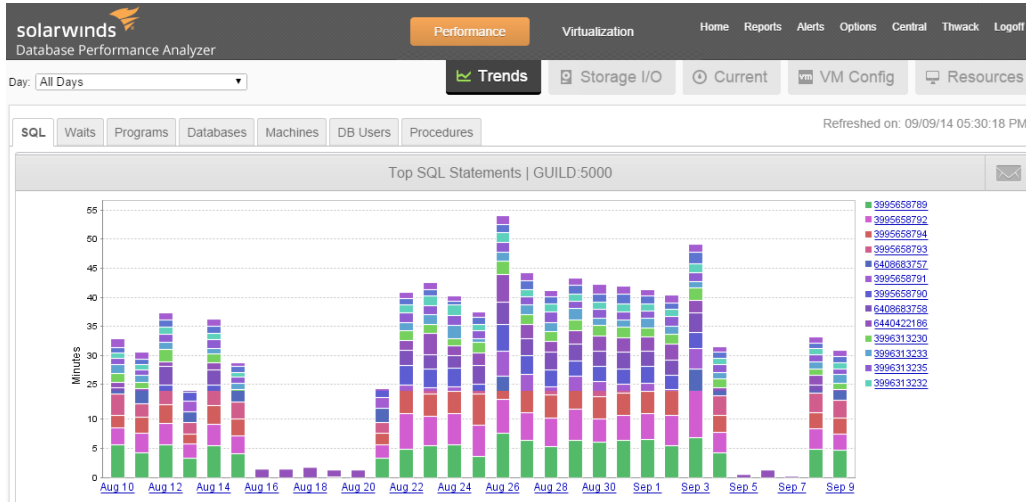

- **Four Clicks to Resolution.** Alarm trail leads DBAs directly to the root cause of the problem in 3-4 clicks.
- **Agentless.** Less than 1% load on monitored servers, even during heavy monitoring periods.
- **Multi-Dimensional Performance Analysis™.** Simplifies root cause analysis by correlating SQL statements, context, system and storage health, wait events, and response time.
- **Resource baselines, alerts and reports.** Proactively monitor system health, identifying trends before they become problems

## Features

- Identify SQL blocks and corresponding locks.
- View response time delays in real time, or history up to weeks and months.
- Automatically schedule graphical performance reports for delivery to any email address.
- Set proactive alerts to be notified of problems via email or SNMP trap.

## Historical Trend Analysis

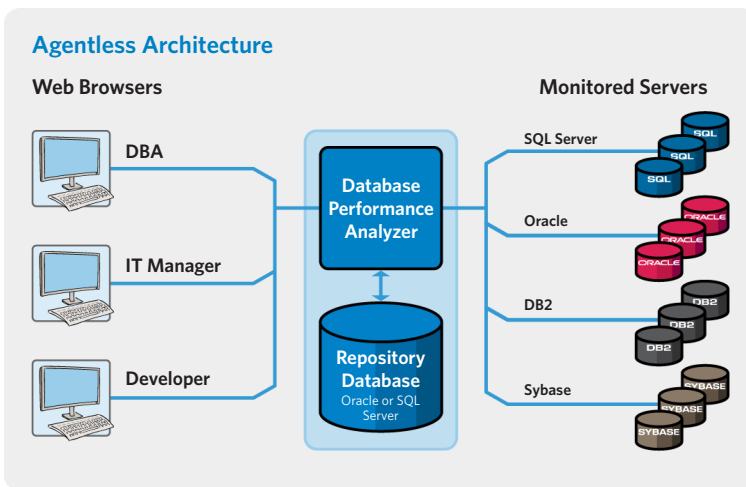

Database Performance Analyzer captures multiple dimensions of response time and server statistics in the performance warehouse repository. While many tools focus only on the current situation, Database Performance Analyzer is unique because it analyzes repetitive clues that explain why the Sybase ASE database response is slow. The graphical display makes it easy for anyone – DBAs, managers, and developers – to see the trends and patterns that tell the complete performance story.

Historical analysis exposes the root cause of problems.

## Agentless Architecture

Database Performance Analyzer installs no software or agent on the monitored server, placing less than 1% load on the monitored database instance. Database Performance Analyzer server software is installed on a separate system, which can be any UNIX®/Linux® or Windows® server, typically a test system under control of the DBA. Database Performance Analyzer data warehouse repository is configured on any Oracle® or SQL Server® instance, either on the same or different server as Database Performance Analyzer software. In multi-vendor environments, SQL Server®, DB2, and Oracle databases can also be monitored from the same Database Performance Analyzer server.

Database Performance Analyzer Agentless Architecture

## Technical Specifications

- Monitor Sybase ASE 15.0.x, 15.5, 15.7 (also called 16). Also monitor SQL Server, Oracle, and DB2 LUW from a single installation of Database Performance Analyze
- No client software required, supported browsers include IE, Chrome, and Firefox.
- Database Performance Analyzer runs on Windows and UNIX/Linux servers. Highly recommended that Database Performance Analyzer system be “always on”, not a laptop that is removed from the network or turned off.
- Database Performance Analyzer repository: SQL Server 2005, 2008, 2012, 2014 or Oracle 9i, 10g, 11g, 12c(single tenant). Repository can be on the same or a different server than Database Performance Analyzer software
