

For more information about information management get in touch with Sigma at sales@sigmasd.com or call us on +44 (0)1364 655200

Shareplex

SharePlex is the largest independent database replication solution in the market that provides high availability, scalability and near-real time data integration. It allows users to distribute the user base over multiple servers to allow simultaneous use of data and to manage the load. It also provides backup availability in case one server fails as well as fast data transfer and storage reporting.

Toad

Toad, the top-ranked ISV for database management, enables DBAs to do their job accurately and efficiently. Toad improves productivity by helping users understand their database environment, meet deadlines with automation and smooth workflows and perform development and administration tasks in one single tool. Also Toad offers multi-platform querying and data modelling tools.

Foglight

Foglight quickly and easily detects, diagnoses, resolves and reports performance issues wherever and whenever they occur. It features comprehensive Oracle performance analytics with change tracking and multidimensional data drill-downs for easier and faster investigation and problem resolving.

Spotlight

Spotlight helps users quickly identify and eliminate bottlenecks in AD, Sybase, Oracle, SQL Server, UNIX and DB2 environments. It displays real-time flow of data within your environment and quickly identifies and resolves performance problems.
