

SolarWinds® Database Performance Analyzer (formerly Confio Ignite) for Oracle is a comprehensive database performance monitoring and analysis solution for DBAs, IT managers, and application developers. Database Performance Analyzer eliminates performance bottlenecks, improves application service, and reduces overall cost of Oracle operations.

Focus On Response Time

Database Performance Analyzer is different because it focuses on database response time, finding the root causes of delays inside of Oracle®. Database Performance Analyzer tracks every query in every session, and captures the Oracle wait events that impose delays on the query.

Database Performance Analyzer helps you quickly pinpoint the issues that have the greatest impact on response time.

Show The Complete Picture

Database Performance Analyzer for Oracle correlates essential statistics to give an understanding of how the response time, server health, and session statistics interact, providing a complete performance picture not available through Oracle Grid Control.

- **Server Health Resources.** Customizable metrics measure CPU, logical and physical I/O, transactions and memory utilization.
- **Query Statistics.** Execution statistics for each query show how response time changes as server resources change.
- **Real Time Sessions.** Within seconds, Database Performance Analyzer is publishing the status of sessions so that DBAs can take immediate action on current performance problems.
- **Storage I/O Analysis.** Clear visibility of storage performance and its effect on response time
- **Oracle E-Business Suite.** Database Performance Analyzer for Oracle explains why E-Business forms and screens are slow, allowing DBAs to identify problems impacting a specific Oracle E-Business user and application.

No other Oracle performance solution ties response time detail to server health and sessions to give an overall understanding of why Oracle is slowing applications and what to do about it.

Fully Functional for 14 Days

Key Advantages

- **Four Clicks to Resolution.** Alarm trail leads DBAs directly to the root cause of the problem in 3-4 clicks.
- **DBA and Developer Collaboration.** Database Performance Analyzer is accessible to everyone in the IT organization, improving collaboration and accelerating problem resolution.
- **Agentless.** Less than 1% load on monitored servers, even during heavy monitoring periods.
- **Performance for Oracle Standard Edition.** Move systems to SE to reduce costs without sacrificing performance. No Tuning Packs needed.
- **Multi-Dimensional Performance Analysis™.** Simplifies root cause analysis by correlating SQL statements, context, system and storage health, wait events, and response time.
- **Resource baselines, alerts and reports.** Proactively monitor system health, identifying trends before they become problems.

Historical Trend Analysis

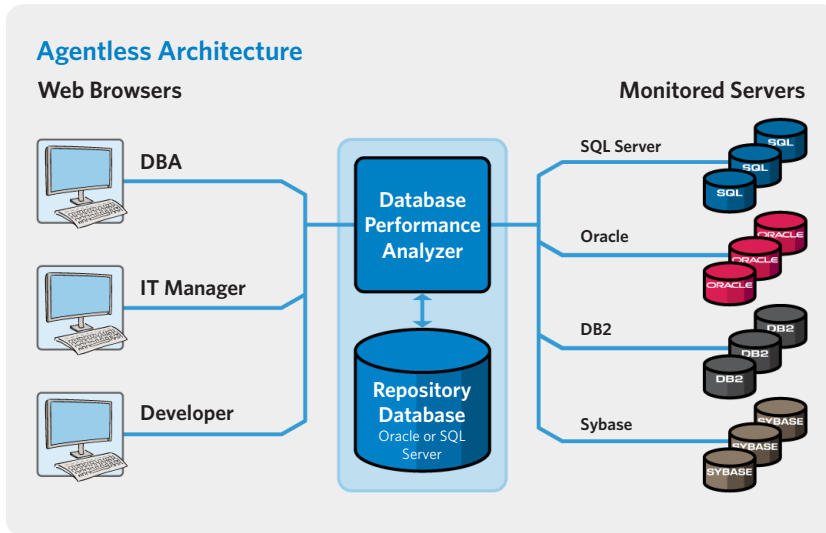

Database Performance Analyzer captures multiple dimensions of response time and server statistics in the performance warehouse repository. While many tools focus only on the current situation, Database Performance Analyzer is unique because it analyzes repetitive clues that explain why Oracle database and e-business application response is slow. The graphical display makes it easy for anyone - DBAs, managers, and developers - to see the trends and patterns that tell the complete performance story.

Historical analysis exposes the root cause of problems.

Agentless Architecture

Database Performance Analyzer installs no software or agent on the monitored server, placing less than 1% load on monitored database instances. Database Performance Analyzer server software is installed on a separate system, which can be any UNIX®/Linux® or Windows® server, typically a test system under control of the DBA. Database Performance Analyzer data warehouse repository is configured on any Oracle® or SQL Server® instance, either on the same or different server as Database Performance Analyzer software. In multi-vendor environments, SQL Server®, DB2 and Sybase® databases can also be monitored from the same Database Performance Analyzer server.

Database Performance Analyzer Agentless Architecture

Features

- No contact with Oracle AWR, so no Oracle Tuning Pack licenses required.
- Identify response time overhead associated specifically with Oracle EXADATA, RAC, and ASM. Quickly pinpoint the root cause of complex issues.
- Identify SQL blocks and corresponding locks.
- Automatically schedule graphical performance reports for delivery to any email address.
- Set proactive alerts to be notified of problems via email or SNMP traps.

Technical Specifications

- Monitor Oracle 9i, 10g, 11g, and 12c-single tenant. Database Performance Analyzer also monitors SQL Server®, Sybase® ASE, and DB2 LUW from a single installation.
- No client software required, supported browsers include IE, Chrome, and Firefox.
- Database Performance Analyzer server runs on Windows® and UNIX®/Linux® servers. Highly recommended that the Database Performance Analyzer system be "always on", not a laptop that is removed from the network or turned off.
- Database Performance Analyzer repository: Oracle® 9i, 10g, 11g, 12c (single tenant) or SQL Server® 2005, 2008, 2012, 2014. Repository can be on the same or a different server than Database Performance Analyzer software.
