

# Archive Manager for Exchange

The most flexible and effective way to archive and manage Exchange

## Award-Winning Email Archiving

Archive Manager for Exchange delivers the enterprise class solution you need, without the complexity. You can automatically and transparently centralize, control and retain all your organization's email. Archive Manager for Exchange allows organizations to consolidate the disparate Exchange and Storage infrastructure to provide centralized lifecycle management with cost-saving efficiency. With the ability to reduce your email storage by up to 80% and reducing your email backup times by 50%, it's easy to see why we've archived more than a billion eMails for over 5,000 clients worldwide.

## Optimize eMail Storage Requirements

Archive Manager for Exchange provides true Single Instance Store (SIS) that automatically removes duplicate copies of a document going to multiple users – unlike alternative Microsoft Exchange email archiving solutions. This frees up large amounts of corporate storage space and stabilizes Microsoft Exchange Server by eliminating unnecessary data. The process can be performed either manually or automatically, as needed. The administrator can also make the PST files read-only to prevent more email from being added and eventually delete them, as the content is fully protected and available from the archive.

## PST Protection and Elimination

PST files are created by end users to store their eMails and keep them accessible. These underground archives are not the best primary storage location for mailbox data for many reasons. Archive Manager for Exchange collects, uploads, and archives PST files to protect them and make them available, even when working remotely. This is done without changing the end user's Outlook folder structure. They believe they still have PST files, but the administrator is working instead with an accessible and searchable archive of those files. This eliminates corrupted files, password-protected files and islands of information.

### Optimize Storage Costs

Reduce unnecessary duplication of documents and free up storage space with Single-Instance technology.

### Lifecycle Management

Manage the lifecycle of your archived documents with automatic rules to archived eMails in storage media.

### High-Availability and Disaster Recovery

Ensure the high-availability of email data for maximum end user efficiency, even when disaster strikes.

# Automatic Archiving, Management and Protection of your eMails

## User Transparency and Productivity

End users see no difference in their Outlook or Outlook Web Access experience with Archive Manager for Exchange. End users simply click on the stubbed email to open it and it appears in Outlook, just like a normal email. Metalogix Archive Manager for Exchange helps end-users have access to all their data while reducing the need to set mailbox quotas and eradicates dependency on PST files.

## Disaster Management and High Availability

Archive Manager for Exchange allows admins to archive parallel messages to multiple locations in real time, providing a backup of the archive on-the-fly. Archived emails can be retrieved quickly from either location. Continuous off-site replication for deploying data disaster recovery is also supported, so end-users are covered in the event of an outage.

## Advanced Search and eDiscovery

Archive Manager for Exchange allows you to produce emails on demand without the need for IT by providing a quick and easy way to search and manage archived documents. Auditors can use the capabilities to put selected groups of data on legal hold, suspending them from any disposition policy, conduct focused searches by name, data range, and specific words, including attachments, and highlight and “tag” results with comments, along with exporting the results for review.

## Lifecycle Management

Archive Manager for Exchange captures, routes, stores, restores, and manages archived emails automatically with its Hierarchical Storage Management (HSM) archive engine. Its information management system controls the retention policy of archived emails. You can move the emails to less costly locations as their

relevance changes. Once the retention time elapses, the messages can be optionally deleted unless they are on legal hold.

## Tech Specs

---

### Source Systems

- ▶ Supports Servers: Microsoft Exchange 2007/ 2010 / 2013 / 2016 and Office 365
- ▶ Archive Database (for metadata): Microsoft SQL Server 2008 R2 or newer / Oracle 11g R2 and above
- ▶ On Premise Archive Storage: All current media (DAS, NAS, SAN, Jukebox, Tape, EMC Centera, NetApp Filer, Hitachi HCP, DVD, CD-ROM, IBM Tivoli Storage Manager, Compliance, etc.)
- ▶ Cloud Archive Storage: Amazon S3, EMC Atmos, Rackspace, Windows Azure, Google Drive
- ▶ Access - Windows: Microsoft Outlook 2007 / 2010 / 2013 / 2016
- ▶ Access - Mac: Microsoft Outlook 2011 for Mac
- ▶ Access - Web: MS Outlook Web Access / Outlook Web App
- ▶ Access - Offline: Access via Archive Manager Exchange Edition Add-In
- ▶ Access - Mobile: Access via IMAP server
- ▶ Windows 2008 R2 SP1/2012/2012 R2/2016
