## ▶ The Foundation of Data Security

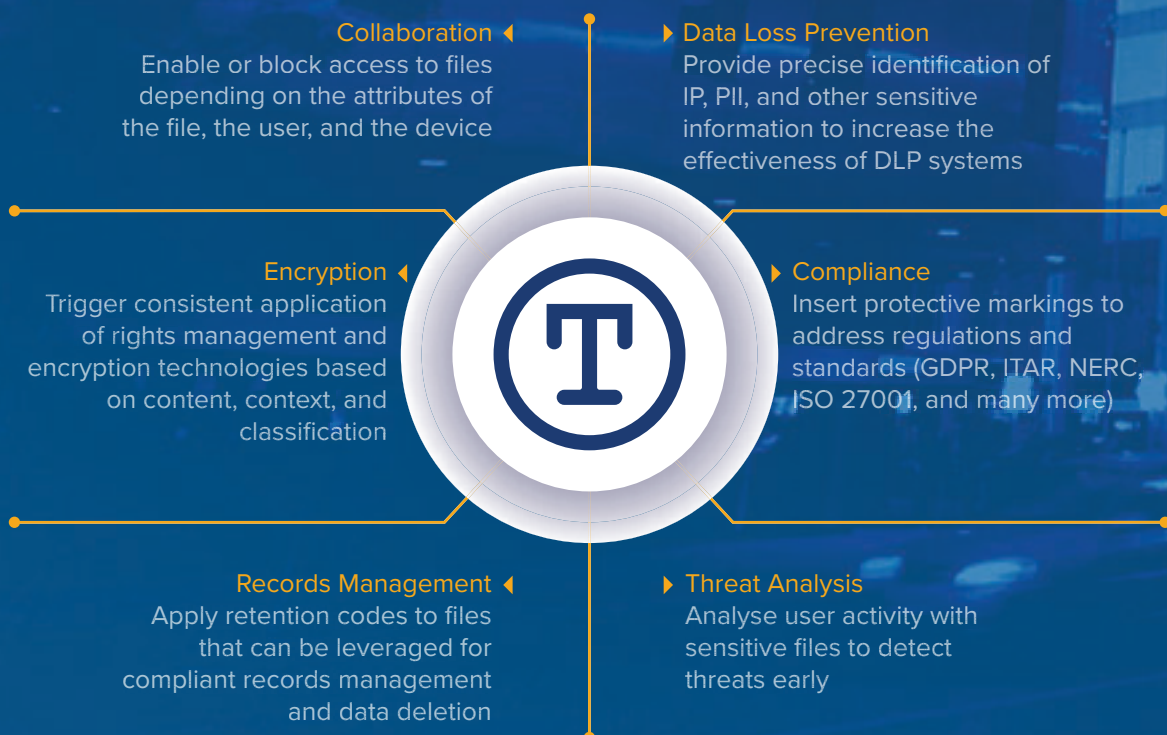

TITUS solutions enable organisations to classify, protect, analyse, and confidently share information, and meet regulatory compliance requirements by identifying and securing unstructured data.

Forrester believes classification is the foundation for all of data security, and it's critical for the success of other data security solutions, such as DLP, rights management, and encryption.

- Forrester Research -

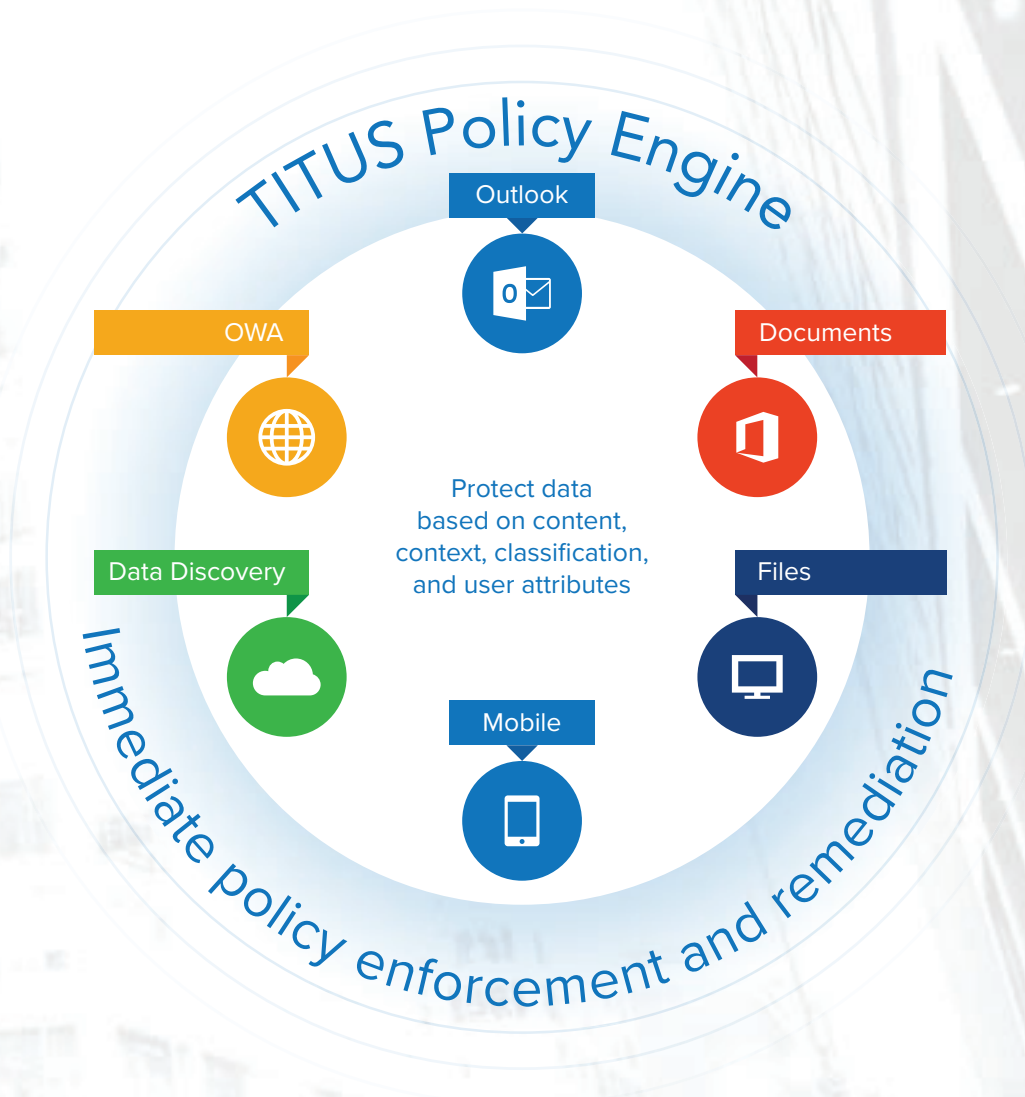

Forrester's TechRadar™: Data Security And Privacy, Q4 2017

## ▶ Optimise Your Security Investments

# ▶ Enterprise Information Protection

TITUS products prevent data loss by increasing user security awareness and by enforcing policies that protect sensitive information in emails, documents, and other file types – on the desktop, on mobile devices, and in the Cloud.

**Identify Business Value**  
Know what you have, where it is, and how it should be handled.

**Transform Security Culture**  
Prompt users to stop, think, and consider the value of information.

**Reduce Mobile Risks**  
Control what information is available on mobile devices and how it can be shared.

## ▶ Trusted **Data Protection Advisors**

Organisations around the world trust TITUS innovative solutions and expertise to help govern and protect their data.

---

Safran Morpho protects their IP and complies with EAR regulations using TITUS.

---

The US Air Force empowers 150,000 users to classify and consistently mark for secure sharing with allies.

---

Wynn strengthens their data governance and defensible deletion strategy with TITUS.
